

Initial Prompt:

Create a one-page website about promoting a cyber security firm that utilizes the following:

- Basic web structure (HTML, CSS)
- Home Page: a Header with “NEON — Network Encryption & Operations Nexus” and a catchy tagline.
- About Page: Why this specific cyber security firm is trustworthy and secure.
- Operator/Consultant Introduction page: description or short summary of qualifications of each personnel.
- Contact details including location of firm
- Use a professional layout like cisco while also utilizing servers and team personnel working as a background
- Main colors to use are dark to light gradients that signifies safety and comfort and use Neon green as an accent color.
- Make the layout clear, clean, professional, and appealing to corporate eyes.

Refinement Prompt:

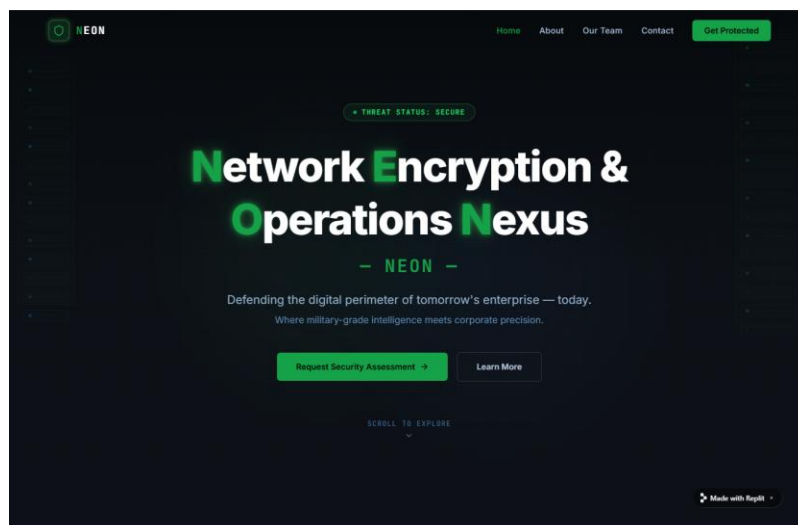

Change the background of the home page to have like a stock image of a dark hall room filled with servers and improve the highlighting of the header by brightening the hue in the middle. Then change the personnel and location to be Filipino based, and include in the WHY NEON that we prioritize hiring highly qualified Filipinos.

Refinement Prompt 2:

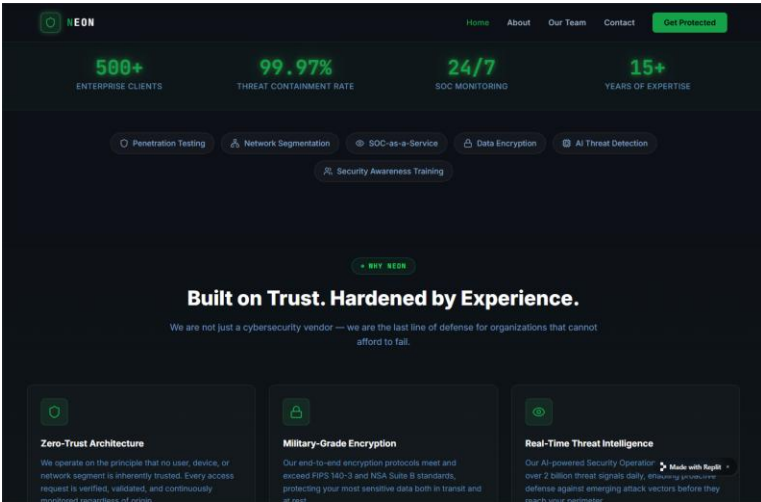

can you revert the Header, it seems more blinding and eye irritating now.

Initial Prompt output:

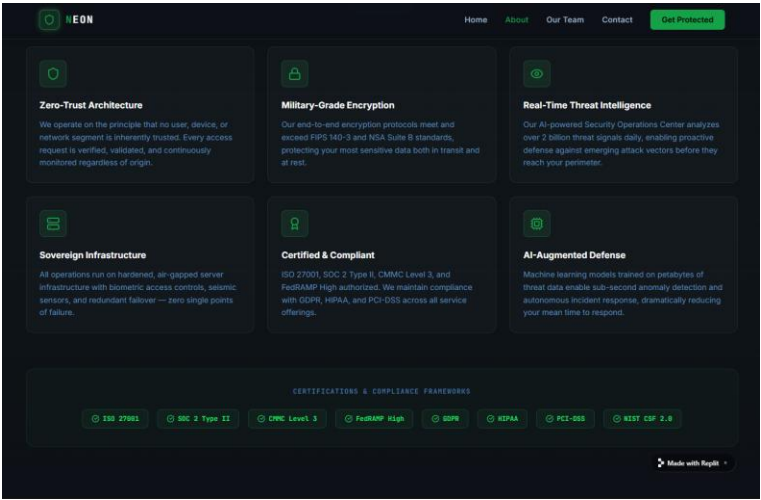

1.

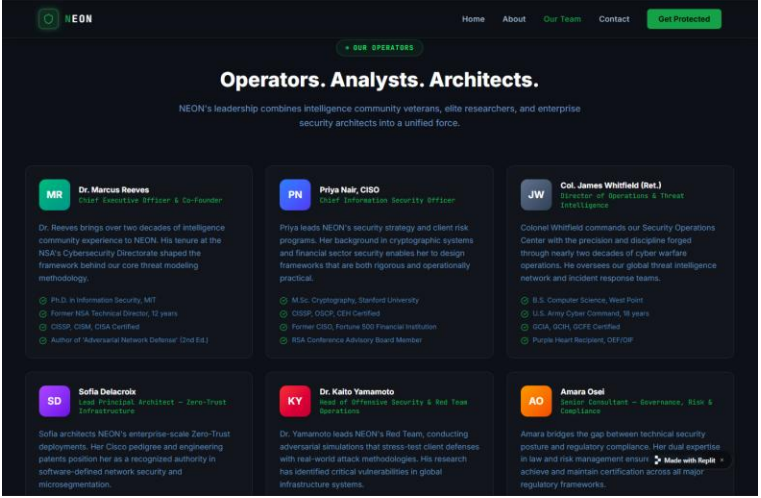

2.

3.

4.

5.

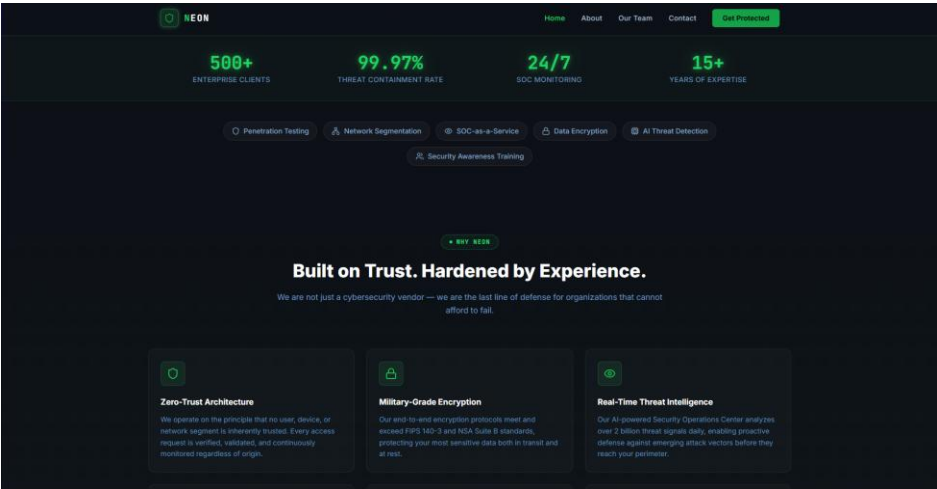

6.

Refinement prompt output:

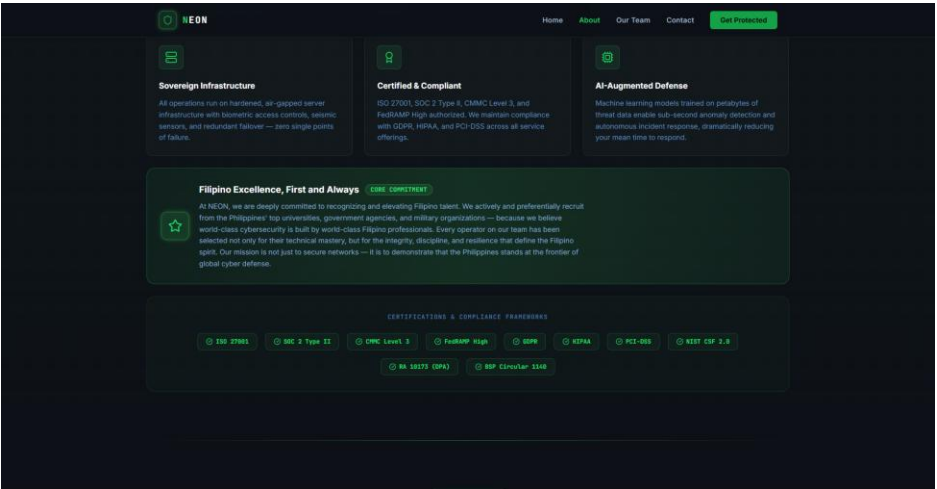

1.

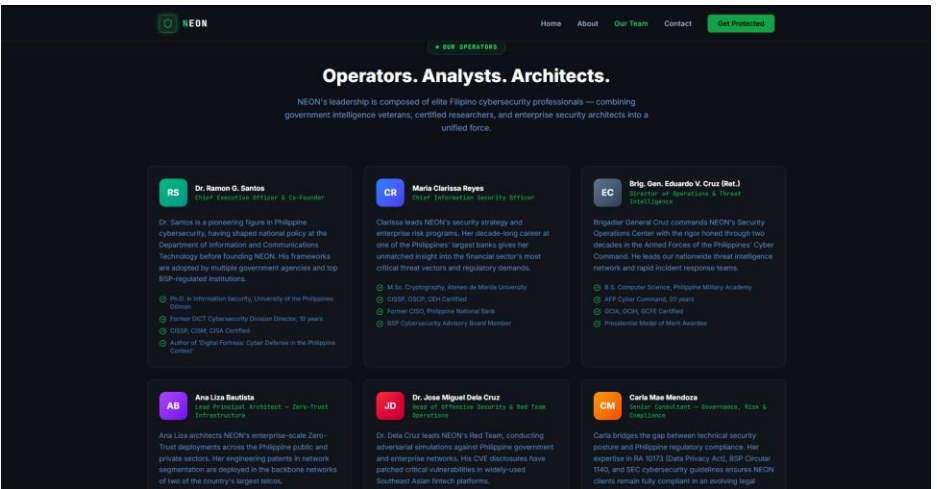

2.

3.

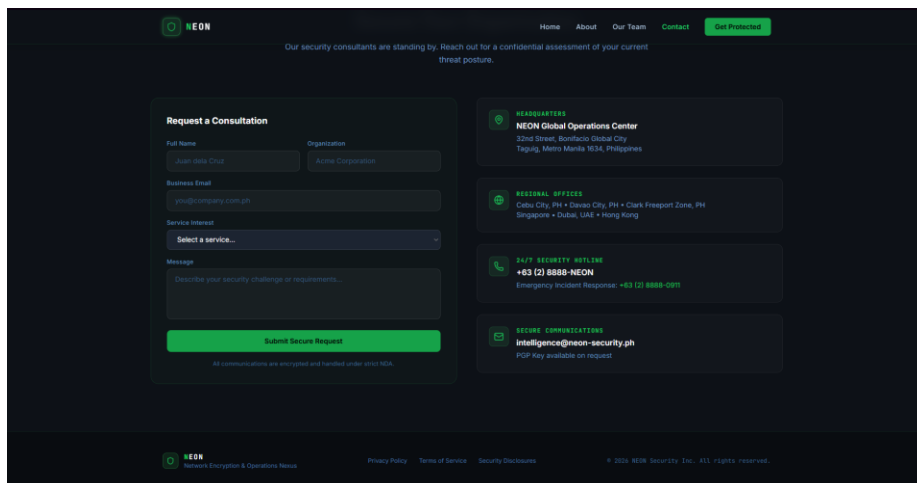

4.

5.

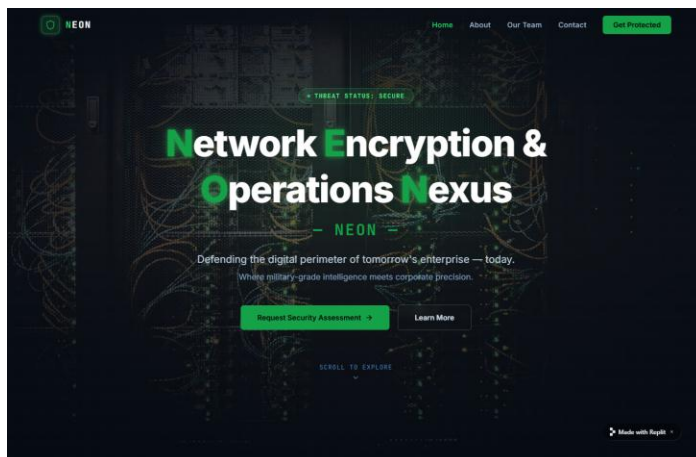

6.

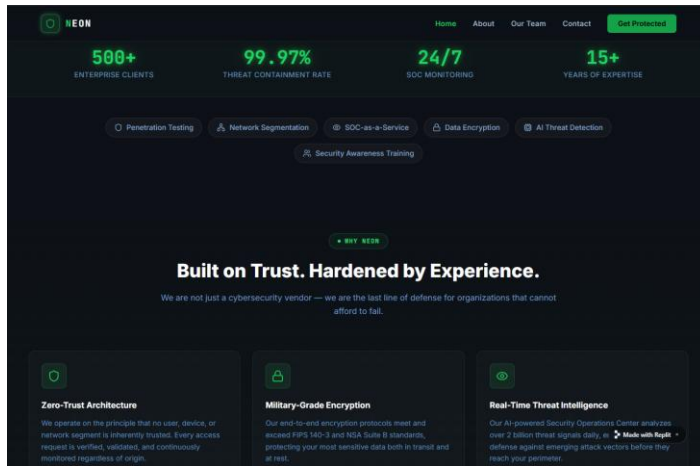

Refinement prompt 2 output:

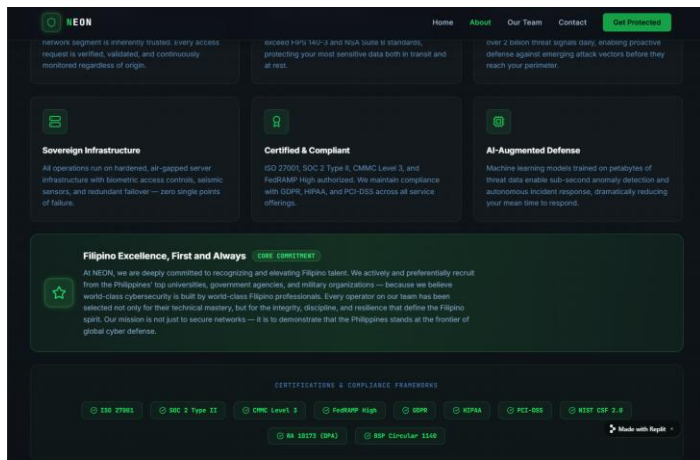

1.

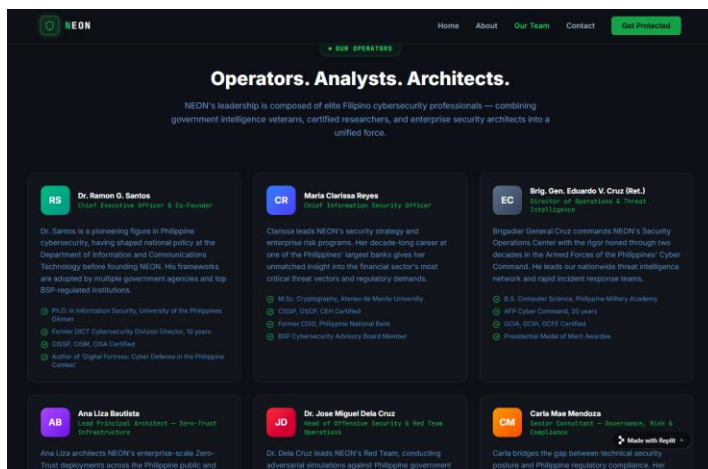

2.

3.

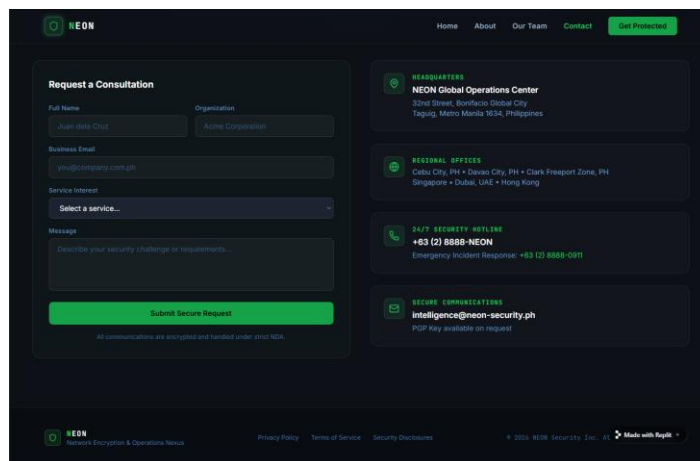

4.

5.

6.

Reflection:

What worked perfectly in my prompts was the level of detail and clarity I delivered and provided. I clearly specified the technical requirements such as HTML and CSS, the website sections such as the Home, About, Personnel, and Contact sections. I also Included the visual direction including the color scheme and professional layout inspired by already existing cyber security firms like Cisco and CloudStrike. This helped the AI generate an output that already aligned with a credible cyber security firm. The inclusion of a clear brand identity, **“NEON – Network Encryption & Operations Nexus,”** made a cohesive and purposeful result. However, some elements still needed manual fixing, particularly the background visuals and the emphasis on the header, which was not fully in line with my vision.

Additionally, the AI did not automatically adapt the personnel and location to a Filipino context, so I had to refine the prompt to make those details more specific.

From this activity, I learned that effective prompting requires not only being detailed but also being clear, logical, and intentional. A well-structured prompt helps guide the AI, but it is not always enough to achieve the exact result in one attempt. Prompting is an iterative process, where refinement plays an important role in improving accuracy and quality. I realized that to better depict what I have in mind, I need to be careful in describing the content and context of the prompt, like including cultural and visual elements. Overall, this experience showed me that strong prompts act like clear instructions, and the better they are written, the closer the output will be to the intended result.
