AI Tool Prompt Engineering Report

AI Tool Overview:

AI Used: ChatGPT Free model

Purpose/Domain: Code generation

Why I chose it: The reason I chose ChatGPT as the AI tool for this activity is due to the extensive history I have with it. The countless consultation sessions I have had with it became a primary reason. The secondary reason I have is because of its trend, due to the amount of time it has been exposed to the world, it has garnered knowledge from all kinds of fields and tracks which means I am more comfortable with consulting with this AI model due to its longer exposure than any other Models.

Original Prompt:

Initial Prompt inputted:

Create a website that includes CSS,HTML, and JavaScript(if applicable) in a self-contained file named index.html. The main purpose of the website is to create a personal portfolio or CV that includes a field for each of the following:

- A recent and clean photo of yourself
- Your Full name (do not include your MI)
- Education Section
- Projects Section
- Skills Section
- Affiliation Section (Optional)
- Research Section (Optional)

Make comments on each parts where I am able to implement or apply my information, make it easy to manipulate/add elements such as the Recent photo of myself. And lastly, make it be responsive through out all devices.

Original Prompt output:

Here's a **complete, self-contained index.html file** with HTML, CSS, and a bit of JavaScript. It's clean, responsive, and heavily commented so you can easily edit and add your own content.

You can copy-paste this into a file named index.html and open it in your browser.

```

What you can easily customize:

- **Profile Photo:** Replace the src in
 - **Name:** Replace "Your Full Name"
 - **Sections:** Just duplicate <div class="card"> or
 - **Remove optional sections:** Delete Affiliations or Research if not needed
 - **Add projects/skills:** Copy-paste cards
-

If you want, I can:

- Turn this into a **Star Wars-themed portfolio (like your coffee shop project)**
- Add **animations or dark mode**
- Or connect it to a **downloadable resume button (PDF)**

AI-Assisted Prompt:

Create a fully functional **personal portfolio / CV website** in a single self-contained file named index.html using **HTML, CSS, and JavaScript (if applicable)**. The website should serve as a clean, modern, and professional personal portfolio that is easy to customize and expand.

Include clearly separated sections for the following:

1. Profile Section

- A recent, clean photo (easy to replace via image source)
- Full Name (do NOT include middle initial)
- Optional short tagline or role

2. Education Section

- List format
- Easy to add/remove entries

3. Projects Section

- Display projects using cards or grid layout
- Each project should include:
 - Title
 - Short description

- (Optional) technologies used

4. **Skills Section**

- Grid or card-based layout
- Easy to add/remove skills

5. **Affiliations Section (Optional)**

- Organizations and roles

6. **Research Section (Optional)**

- Research titles and short descriptions

☑ Use a **dark-to-light gradient color palette** to convey:

- Safety
- Comfort
- Professionalism

☑ Use **neon green as an accent color** for:

- Buttons
- Highlights
- Borders or hover effects

☑ Maintain a **modern, minimalistic UI**

☑ Include:

- Soft shadows
- Rounded corners
- Clean spacing

☑ Fully responsive across:

- Mobile
- Tablet
- Desktop

☑ Use flexible layouts (e.g., CSS Grid or Flexbox)

☑ Include at least one simple interactive feature (e.g., toggle section, expand/collapse, or button interaction)

☑ Add **clear comments** in each section explaining:

- Where to input/edit personal data
- How to add new items (projects, skills, etc.)

☐ Make the structure **easy to modify**, especially:

- Profile photo
- Sections
- Cards/items

Everything must be inside one file (index.html)

No external dependencies

Comparison & Analysis:

The difference between the prompt I originally thought up and the AI-Assisted prompt is mainly the level of detail and intention behind each instructions. My original prompt was clearer and straight forward, due to how I conveyed what I had envisioned, a personal portfolio website with specific sections like profile, education, projects, skills, and etc. I made sure that I included important details such as responsiveness through all platforms and devices as well as creating the website in a self-contained file. Thus, my prompt had a straight forward and professional feel to it.

On the other hand, the revised prompt improves it by adding specificity and well-structuredness. Instead of just implying what the website should have, it also explains how it should look and feel. An example I could provide is the idea of using dark-light gradient with an accent of neon green as an accent which represents me (due to how I usually use these color palettes in my projects). In the revised version, the instructions are more clearer and intentional, which adds to the liveliness and personality of the website, guiding the design better instead of leaving it open to interpretation. Another stark difference is how the revised prompt focuses significantly on usability and editing. In my original prompt, I implied including comments to make sure that I won't waste time figuring out where or what I work with, however, the AI-Assisted version emphasized making everything easily manipulatable and modifiable, just like how easier it is to see where to change the profile photo or how to add new projects and skills. Which makes a big difference, especially if I am to expand the website on a later date. Furthermore, it adds a bit more depth by suggesting interactivity, like the toggle features, which wasn't in my original prompt. In conclusion, my prompt had a great structure and detailed information, but it does not compare to the AI-Assisted prompt due to the refined, polished, lively, and interactivity of the website which is more aligned with exactly how I want the final output to look and function.
